

## Skyline WindScape® Cases

There are 6 cases highlighted for use in packing WindScape displays. Refer to the Packaging Guide document under “Learn More” for help in case purchasing decisions.

Three are new WindScape branded luggage style options that can be hand carried- or shipped in a box.

**#1. Backpack** – specifically for the 6’x52” Table Top unit. It can hold the frame, feet, cover, and the Inflator with DC Battery pack or AC power source.

The inflator assembly components will need to be removed from their carrying bag.

**NOTE that the battery must be disconnected from the inflator for air travel or shipping by truck.**

**#2. Expandable wheeled Carry-on Case** – When the expansion feature is not being use, this case can fit in an overhead compartment on domestic airplanes. (See Airline Luggage Restrictions under "Learn More.") It can also be checked as luggage. The Carry-on Case will accommodate a 10’ WindScape® display, 2 feet inside lined, zippered compartments and 2 LED Arm Lights. A separate compartment near the wheels safely holds the inflator in place and unzips for easy access to inflate WindScape or during airport screening.

**Single light packaging for the LED Arm Light** is designed specifically to fit into the WindScape Carry-on Case to provide additional protection while shipping. All light cords fit into the same package with the light. Orderable with or without the light.

**#3. Wheeled duffel bag with handle** – 10’ backwalls with lights, feet and overlay will fit into this hand carried bag. Many of the small to medium size shapes will also fit into this style case.

**#4. Wheeled Hard Case** – This is another good option for backwalls with feet or lights or other accessories that will be shipped.

**#5. Utility Case** – The standard Skyline Utility case can hold several WindScape displays. A special WindScape Utility Case Conversion case is modified to become a case table –see Case Table Conversion section of the eCatalog for more information.

**#6. Podium Case (formerly Quest or Trade Winds Fabric Pop-up case)** This case will hold large or multiple displays and accessories. It also converts into a Podium Case Table–see Case Table Conversion section of the eCatalog for more information.

**Pack Sacks** - There are 4 sizes of Pack Sacks, as well as a zippered bag that holds the Table Top unit. Refer to the Packaging Guide for information about which Pack Sack size is used for which frame.

**Monitor Stand Hard Case** - This reusable, wheeled case greatly simplifies packing and shipping the WindScape Monitor Mount. Each component has its own designated compartment and eliminates the need for additional packing material. Within Fed Ex Large Package weight and size limits.
